

Installing TechWizard™ Version 5 Update and Registering

This document covers updating TechWizard™ to version 5 and registering the program. Once you have version 5 running, please refer to “Using the New Nutrition Facts Label Formats in TechWizard Version 5”.

Please note that TechWizard™ will need to be registered **after** installing the update. A registration code and program identification number (if needed) are supplied separately.

To make things easier for you, TechWizard™ version 5 is installed in the same folder as TechWizard™ version 4. The link you click to start TechWizard™ will still read TechWizard™ Version 4. You will know that version 5 is loaded when you open the front panel. All your original formula and ingredient files will remain intact after the update. The program will have the same look and feel too.

System Requirements:

A computer running Microsoft® Windows® and Microsoft® Excel 2007 or higher is required.

Installing TechWizard™

Please go to the following location to install the version 5 patch:
<http://owlsoftware.biz/UpdateTWzNet5.htm>

Follow the directions provided in the link to install the patch.

Registering TechWizard™ Version 5

The first time TechWizard™ is started after updating to Version 5 it must be registered again. Start TechWizard™ as you would normally. The following window will appear. If the Enable Content button appears then click it (A). The following message will appear if everything starts correctly (B).

The screenshot shows the Microsoft Excel interface with a yellow security warning bar that reads "SECURITY WARNING: Macros have been disabled." and an "Enable Content" button circled in blue with the letter 'A'. Below the warning, a dialog box titled "Attempting to load TechWizard™ application..." is displayed. The dialog box contains the following text:

Attempting to load TechWizard™ application...

In a few seconds you will be redirected to another screen which means that the program is ready for use. If you are not redirected to another screen then the program initialization has failed. Please make sure that Excel is configured to enable macros. If you are prompted to enable macros then do so. Close this file and try to start again. If this does not work then contact Technical Support.

If you need assistance, please contact Technical support.

Overlaid on the dialog box is a smaller window titled "TechWizard - - Proceed" with a close button (X) and a blue circle containing the letter 'B'. The text in this window reads: "TechWizard(tm) successfully opened the necessary files. You may continue." Below this window, the text "Please make sure you are prompted to enable macros then do so." is visible.

Next the Front panel appears. Click the register button (C).

If you are a permanent user (Purchase Program option in figure below), you will have a registration code and a program identification number. If you are not a permanent user, you will only have a registration code. Select the registration option (D), enter the registration code (E), and enter the program identification number if one was provided (F). Click Ok and you are ready to enter the program.
